

Dear Public Hearing Officers,

Jordan Lake is a favorite recreation spot for North Carolinians, and is where many communities get drinking water. Unfortunately, NC Division of Water Quality data show Jordan Lake is severely polluted. A strong Jordan Lake plan will not only safeguard a treasured Triangle resource; it will also set the standard for protecting lakes across North Carolina.

I support the science behind this clean-up and protection plan and ask that you adopt strong rules to protect Jordan Lake from polluted runoff, sewage plant discharges, and other types of pollution.

These rules should include:

- protecting existing riparian buffers to filter out pollutants;
- controlling pollution from septic tanks;
- implementing "Phase II stormwater" throughout the watershed to control runoff pollution from future development; and
- requiring "stormwater retrofits" to control runoff pollution from existing development.

Please consider my remarks part of the hearing record.

Sincerely, MARIA CRUZ TENO LIO
